

PRESS RELEASE
March 8, 2005

Police Central, Inc.
6145 Barfield Road, Suite 127
Atlanta, GA 30328
(678) 904-1654
Contact: J. S. Martin, Chief Executive Officer

Police Central, Inc. announced today that it has been selected by the SOUTH CAROLINA DEPARTMENT OF PUBLIC SAFETY to provide Law Enforcement Software to be used by the **South Carolina Highway Patrol**, the **South Carolina Bureau of Protective Services**, and the **South Carolina State Transport Police** throughout the State. "The Department of Public Safety issued a Bid Solicitation, and after evaluation of all the Responses selected Police Central," said James S. Martin, the Chief Executive Officer of the Company. "Our software will be used for Incident Reporting by the three DPS Law Enforcement Divisions throughout the State of South Carolina".

The three divisions within the Department of Public Safety respond to criminal incidents and prepare an Incident Report with the details of that activity. The Police Central software will be used to capture all details and photographs relating to crimes handled by those Agencies. "These Incident Reports will then be submitted to the **South Carolina Law Enforcement Division (SLED)** for processing and uploading to the Federal Bureau of Investigation" said Martin. "Our software insures that all required information is gathered correctly and passed on to SLED and then to the **Federal Bureau of Investigation**. We are very pleased that our software can play such a crucial role at the Department of Public Safety -- the largest reporting agency in South Carolina" he stated.

Incident Reports serve a critical mission in gathering important crime and statistical data. This data is used for investigations to help solve crime and for crime analysis. Incident Reports contain information relating to Victims, Suspects, Witnesses, Vehicles and stolen/recovered property, and become the basis of all ongoing investigations. Every Law Enforcement agency is required by the State and the FBI to submit such reports.

"We specifically like Police Central's Web-enabled approach to computing", stated the SCDPS ITO Staff. This certainly simplifies our use and administration of the software." "Police Central also offers over twenty additional Modules that could be added to our system over time to increase its use within the Department" they added.

According to Martin, this is the first state-wide deployment of Police Central's software. "The South Carolina Department of Public Safety can serve as a real showcase for our products. We hope to be able to show other states how our unique, web-enabled software can provide statewide deployments" he said. "The Department of Public Safety is the largest Law Enforcement agency in the State of South Carolina, so this will be a very prestigious account for us."

The South Carolina Department of Public Safety exists to ensure the safety of South Carolina's citizens and visitors. The employees of the Department of Public Safety fulfill this mission by enforcing the traffic, motor vehicle and motor carrier laws; educating the public on highway safety; administering highway safety and criminal justice grant programs; operating a comprehensive law enforcement training program and certification process; and providing security and safety services for public officials as well as state properties.

Police Central, Inc., established in 1994, provides complete software for every aspect of Law Enforcement activities. Police Central software is currently in daily use in approximately one-hundred agencies in twenty-five states across the country. The Company produces its software in a series of web-enabled, fully integrated Modules; and each Module addresses a specific Law Enforcement application.
